/note="Vector: pBluescriptSK-; Site 1: EcoRI; Site 2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and
predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days
at room temperature, 150 rpm, harvested, blended,
reinoculated into complete medium 24 h, room temperature,
150 rpm. Sequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome
sequence was available, the EST sequence was trimed
according to the alignment, otherwise sequence quality was
assessed using phredPhrap version 991019 and trimmed
according to phd files (0.05) and for vector seqs."

/note="Wector: pBluescriptSK-; Site_1: EcoRI, Site_2:
XhoI; Unidirectional cloning. EcoRI—side has T3 prīmer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended, reinoculated into complete medium 24 h, room temperature, 150 rpm. Sequences were processed by one of two methods. Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

/note="Vector: pBluescriptsK-; Site_1: EcoRI; Site_2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended, reinoculated into complete medium 24 h. room temperature, 150 rpm. Sequences were processed by one of two methods. Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredphrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

/note=""Vector: BBluescriptSK-; Site 1: ECRI, Site 2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended,
reinoculated into complete medium 24 h. room temperature,
150 rpm. Sequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

/note="Wector: pBluescriptSK-; Site_1: EcoRI_side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended, reinoculated into complete medium 24 h, room temperature, 150 rpm. Sequences were processed by one of two methods. Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 9910.9 and trimmed according to phd files (0.05) and for vector seqs."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /organism="Magnaporthe

/note="Vector: pBluescriptSK-; Site 1: EcoRI; Site 2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended, reinoculated into complete medium 24 h, room temperature, 150 rpm, bequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

/note="Wector: pBluescriptsK-; Site_1: EcoRI; Site_2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended, reinoculated into complete medium 24 h, room temperature, 150 rpm. Sequences were processed by one of two methods. Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

/note="Vector: pBluescriptSK-; Site_1: EcoRI; Site_2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended,
reinoculated into complete medium 24 h, room temperature, 150 rpm. Sequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredbrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2002 this sequence version replaced gi:19232149

           /clone_lib="Magnaporthe grisea CM Uni-Zap XR Library"
/note="Vector: pBluescriptSK; Site 1: EcoRI; Site 2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and
predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days
at room temperature, 150 rpm, harvested, blended,
reinoculated into complete medium 24 h, room temperature,
150 rpm. Sequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome
sequence was available, the EST sequence was trimed
according to the alignment, otherwise sequence quality was
assessed using phredPhrap version 991019 and trimmed
according to phd files (0.05) and for vector seqs."

/clone lib="Magnaporthe grisea CM Inide has T3 primer and predominantly 5 reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended,
reinoculated into complete medium 24 h, room temperature,
150 rpm. Sequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

/note="Wector: pBluescriptSK-; Site_1: EcoRI, Site_2:
XhoI; Unidirectional cloning. EcoRI—side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended, reinoculated into complete medium 24 h, room temperature, 150 rpm. Sequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 991019 and trimmed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Location/Qualifiers

/note="Wector: pBluescriptSK; Site_1: EcoRI, Site_2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days at room temperature, 150 rpm, harvested, blended, reinoculated into complete medium 24 h, room temperature, 150 rpm. Sequences were processed by one of two methods. Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

//clone="Vector: pBluescriptSK-; Site 1: EcoRI; Site 2:
XhoI; Unidirectional cloning: EcoRI side has T3 primer and
predominantly 5' reads. T7 primer on XhoI side of insert.
Strain inoculated into complete medium grown for two days
at room temperature, 150 xpm, harvested, blended,
reinoculated into complete medium 24 h, room temperature,
150 xpm. Sequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome
sequence was available, the EST sequence was trimed
according to the alignment, otherwise sequence quality was
assessed using phredPhrap version 991019 and trimmed
according to phd files (0.05) and for vector seqs."

APPLICANT: National Institute of Agrobiological Sciences.

APPLICANT: Bio-oriented Technology Research Advancement Institution

APPLICANT: The Institute of Physical and Chemical Research.

APPLICANT: The Institute of Physical and Chemical Research.

APPLICANT: Foundation for Advancement of International Science.

TITLE OF INVENTION: FULL-LENGTH PLANT CDNA AND USES THEREOF

FILE REFERENCE: MOA-0205Y1-US

CURRENT APPLICATION NUMBER: US/10/449,902

CURRENT FILING DATE: 2003-05-29

PRIOR APPLICATION NUMBER: UP 2002-203269
